
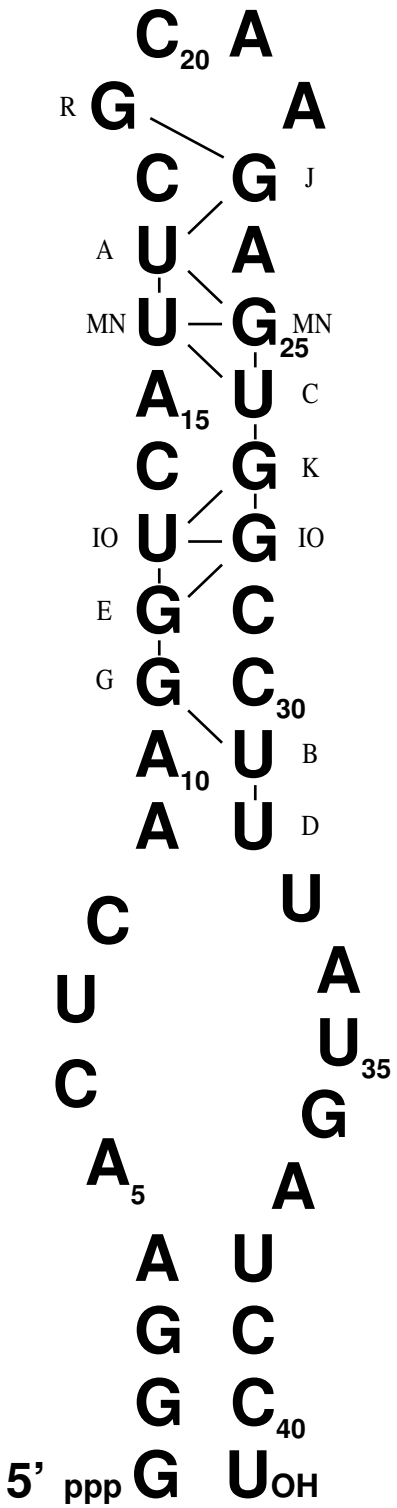

Figure 1.3.3: Assignments of imino resonances to R1.1[LSΔ6] RNA protons. Lines represent NOEs observed between imino protons. The assigned protons and the NOEs between them are present in each of the conditions examined, excepting the NOEs between K and I, G and B and B and D, which are weak or absent at 0 mM KCl, and that between R and J, which is absent in 5 mM Mg^{+2}.
